

Come See What You're Missing!

If you haven't visited the FFAST Central Demonstration Center in a while, chances are you're missing a lot of new assistive technology that can help!

We know it is sometimes hard to travel to our Center to learn about and try devices. That's why we're reaching out to let you know about some really simple aids for daily living that can make a difference. Check out our latest video to introduce you to things like:

- Pill Popper
- Straw Holder
- Finger Tongs
- Finger Protector
- Hands Free Bag Holder

These may not be of use to you, but the point is to give you ideas of what else might be out there to make life easier, whether it's a matter of physical, visual, hearing, mobility, or other areas that might be a challenge.

Want another way to discover what's new? Check us out with FaceTime! If you have the new iPad2 or iPod Touch 4, you can connect with us through video calling. You can tell us what you want to see, and we can take you on a virtual tour of our Center! Or let us show you some of the latest apps on our iPad. Just give us a call to schedule some Video time!
